Joe Gaudet

Staff Software Engineer
Vancouver, BC • (778) 994-4846 • joe@joegaudet.com • joegaudet.com • linkedin.com/in/josephgaudet

SUMMARY

Engineer with 20 years of hands-on experience shipping products across web, mobile, and embedded platforms, in industries including energy, education, social media, logistics, and ecommerce. Founded Learndot and led it to acquisition; led engineering at Foodee through its acquisition by Sodexo. Formerly a Director and founder, now focused on Staff/Principal IC work: building well-designed systems that remove operational toil.

CORE SKILLS

Full-stack Software Engineering • System Design & Distributed Systems • Frontend: TypeScript / JavaScript (React, MapLibre, Ember) • Backend: Ruby/Rails, Python (FastAPI), Scala, Java • Data: PostgreSQL/PostGIS, DuckDB • AI & LLM Integrations (OpenAI APIs, incl. Realtime) • AI-assisted Development • DevOps, CI/CD & Agile Practices

IMPACT HIGHLIGHTS

- Designed and implemented an AI-based scheduling system that cut manual operations overhead by more than 50% and became key IP in Foodee's acquisition by Sodexo
- Led technology through two acquisitions (Learndot; Foodee/Sodexo)
- Scaled an engineering team from 6 to 20+, designing the hiring and interview process
- Transformed CI/CD practice, cutting release cycles from 30 days to daily deploys

PROFESSIONAL EXPERIENCE

Atreides — Staff Software Engineer

May 2025 – Aug 2026

Vancouver, BC

- Sole engineer on my product area for the majority of its development, owning the full stack: React/MapLibre frontend, Python (FastAPI) services, PostgreSQL/PostGIS and DuckDB data layer
- Designed architecture for fast, interactive browser-based exploration of very large geospatial datasets, focused on time to interactive and smooth pan/zoom performance
- Sustained team-level throughput as a single engineer using AI-assisted development workflows

Foodee — Principal Architect

Nov 2023 – Nov 2024

Vancouver, BC (acquired by Sodexo)

- Drove architectural modernization post-acquisition, ensuring enterprise-grade compliance, observability, and scalability
- Re-architected core intelligence features, reducing internal operations toil by more than 50% and enabling greater customer scale
- Mentored Staff-level peers across frontend and backend disciplines in distributed systems design and API performance

Foodee — Director of Software Development

Oct 2017 – Nov 2023

Vancouver, BC

- Developed a constraint-optimizing scheduler (Foodee Intelligence), reducing manual overhead and scaling key business functions; a key piece of IP in the Sodexo acquisition
- Developed and executed the company's technical strategy with department heads, reducing manual toil across all business functions
- Led engineering through Foodee's acquisition by Sodexo, ensuring compliance through due diligence

- Designed and implemented CI/CD practices achieving 5–10 deployments per day with high test coverage and code quality
- Built a general-purpose connector for third-party logistics, standardizing delivery time estimation and enabling rapid deployment to new metros
- Designed the technical interview and hiring process, scaling the team from 6 to 20+

Foodee — Technical Lead May 2016 – Oct 2017

Vancouver, BC

- Improved software quality, boosting test coverage and refining coding practices across the Rails API and Ember front end
- Transitioned release cadence from monthly to daily, enabling faster iteration and delivery
- Implemented APM and error tracking; mentored junior developers

Hootsuite — Senior Software Developer Jul 2015 – May 2016

Vancouver, BC

- Designed and implemented microservices in Scala to improve system scalability and flexibility
- Contributed to front-end modernization from jQuery to React, with a focus on i18n and a11y
- Delivered solutions across all layers of the stack; mentored junior developers

Learndot — CTO & Founder 2009 – May 2015

Vancouver, BC (acquired)

- Led software development and technology decisions from inception to exit
- Designed and implemented core technologies including a JSON API and multiple client-side JavaScript and mobile applications
- Built a high-performance engineering culture focused on test-driven, maintainable, readable code

Wolftek Corporation — Software Developer / Engineer in Training May 2008 – Sep 2009

Fredericton, NB

- Designed and implemented systems for LIDAR Services International, including reverse engineering a USB driver for high-resolution SLR cameras

EDUCATION

University of British Columbia — Master of Engineering, Computer Engineering 2011

Computer vision and image processing, machine learning, software quality and testing, parallel computing

University of New Brunswick — BScEng, Computer Engineering 2008

Embedded realtime systems and software engineering; graduated with distinction, Dean's List throughout
